EngiMind — Spec

User story

As an engineer, I want to upload technical datasheets and ask questions about them, so that I get accurate answers backed by citations to the exact document and page.

In scope (MVP)

- Upload documents in PDF and CSV format
- Ask a question about the uploaded documents
- Get back an answer with a citation (document name + page/row)
- If the documents don't contain the answer, say so instead of guessing

Out of scope (for now)

- Frontend / UI
- AI agents and tool calling (calculator, external APIs, database queries)
- Auth / user accounts
- Multi-turn conversation (each question is answered independently)
- Generating output sheets or reports
- TXT file support (add later)

Sample documents

- *ArduinoMega2560Rev3Datasheet*.pdf
- *ArduinoMegaPinReference.csv*

Test questions

#	Question	Expected answer	Source
1	What is the operating temperature range of the Arduino Mega 2560?	-40°C to +85°C	*Arduino Mega 2560 Rev3 Datasheet*, Section 2.1, page 6/34
2	What is the output voltage of the Arduino Mega 2560?	+5V and +3.3V	*Arduino Mega 2560 Rev3 Datasheet*, Section 5.1, page 11/34
3	How many PWM-capable pins does the Arduino Mega 2560 have?	15	*ArduinoMegaPinReference*
4	How many digital I/O pins does the Arduino Mega 2560 have?	54	*Arduino Mega 2560 Rev3 Datasheet*, page 2/34
5	How many analog input pins does the Arduino Mega 2560 have?	16	*Arduino Mega 2560 Rev3 Datasheet*, page 2/34

#	Question	Expected answer	Source
6	What microcontroller does the Arduino Mega 2560 use?	ATmega2560	*Arduino Mega 2560 Rev3 Datasheet*, page 2/34
7	How does pin 17 of the Arduino Mega compare to pin 17 of the Arduino Nano?	Not enough information	— (no Nano document in the sample set)

Success criteria

- Correct answer **and** correct citation for at least 6 of the 8 test questions
- Question 7 (no answer available) correctly returns "not enough information" rather than a guess or an answer pulled from outside the documents
